COMMITTEES

Honorary Chairs

Fachrul Razi, Religious Affairs Minister of the Republic of Indonesia

Johnny G. Plate, ICT Minister of the Republic of Indonesia

Amany Lubis, Rector of State Islamic University of Syarif Hidayatullah Jakarta

Steering Committee Co-Chairs

Lily Surayya Eka Putri, State Islamic University of Syarif Hidayatullah Jakarta, Indonesia

Syopiansyah Jaya Putra, State Islamic University of Syarif Hidayatullah Jakarta, Indonesia

Ismail Khalil, Johannes Kepler University Linz, Austria

Tri Haryanto, IT Best Practice, Indonesia

Djoko Soetarno, Coris, Indonesia

Abdul Wahab Abdul Rahman, International Islamic University Malaysia, Malaysia

Sri Hartati, IndoCEISS, Indonesia Computer Electronic and Instrumentation Support Society

General Organizing Chair

Yusuf Durachman, Syarif Hidayatullah State Islamic University Jakarta

Arifah Hidayati, PROF.DR. HAZAIRIN, SH University

Organizing Committee

(Syarif Hidayatullah State Islamic University Jakarta)

Dewi Khairani

Siti Ummi Masrurroh

Yuditha Ichsani

PREFACE

Assalaamu 'alaykum warahmatullahi wabarakaatuh,

The CITSM 2021 is in the general area of communication and information technology. It provides a forum for presenting and discussing the latest innovations, results and developments in IT Management & organizations, IT Applications, Cyber & IT Security, and ICT. The main objective of this conference is to provide a forum for engineers, academia, scientist, industry, and researchers to present the result of their research activities in the field of Computer and Information Technology. The primary focus of the conference is to create an effective medium for institutions and industries to share ideas, innovations, and problem-solving techniques.

There are 270 papers submission and only 124 papers are accepted. The accepted papers will be presented in one of the regular sessions and will be published in the conference proceedings volume. All accepted papers are submitted to IEEEXplore. IEEE Conference Number: #50537. Catalog Number: CFP2137Z-ART, ISBN: 978-1-6654-3548-2, CFP2137Z-USB, ISBN: 978-1-6654-3547-5.

On behalf of the CITSM 2021 organizers, we wish to extend our warm welcome and would like to thank for all Keynote Speakers, Reviewers, Authors, and Committees, for their effort, guidance, contribution and valuable support. Finally, thanks to all lecturers and staffs of the Faculty of Science & Technology, UIN Syarif Hidayatullah Jakarta and PROF.DR. HAZAIRIN, SH University and other parties that directly and indirectly make this event successful.

Wa billahi taufiq wal hidaayah.

Wallahul muwaffiq ila aqwamit-tharieq.

Wasalaamu 'alaykum warahmatullahi wabarakaatuh.

Arifah Hidayati (Organizing Chair)

TABLE OF CONTENT

	FRONT MATTER	ii-iv
	PREFACE	v
	COMMITTEES	vi-xi
	TABLE OF CONTENT	xii-xxiii
1	Public Key Encryption in the Cloud Computing Environments: Trust and Untrust <i>Herlino Nanang, Yusuf Durachman, Ahmad F Misman, Zahidah Zulkifli, Husni Teja Sukmana</i>	1-6
2	Integration of the Helpdesk System with Messaging Service : A Case Study Approach <i>Herdi Hardianto, Imam M Shofi, Dewi Khairani, Imam Subchi, Dion Eprijum Ginanto, Arifah Hidayati</i>	7-12
3	Prevention Efforts Against E-Commerce Fraud Based on Indonesian Cyber Law <i>Yanto Sufriadi</i>	13-19
4	Assessing Buying Decision of Food Products by Customers of an Electronic Commerce Application during Covid-19 Pandemic in Indonesia <i>Entis Somantri, Ujang Maman, Iwan Aminudin, Armaeni Dwi Humaerah, Endin Mujahidin, Yayat Suharyat</i>	20-25
5	Designing Prototype of Follow Me Robots to Help Lift Loads of Goods Based on Ultrasonic Sensor <i>Ambran Hartono, Elvan Yuniarti, Syarif Maulana</i>	26-30
6	Monitoring of Smoke in The Room with The Fuzzy Method Based on The Internet of Things (IOT) <i>Iwan Fitrianto Rahmad, Evri Ekadiansyah, Budi Triandi, Ratih Puspasari, Dwi Ardiyanti</i>	31-35
7	Clustering The Quality Level of Lecturer Teaching Using The K-Means Method <i>Faisal Harahap, Mutiara Sovina, Alfa Saleh</i>	36-41

	Determining Fish Features Decision Support System (DSS) with Oreste Method	
8	<i>Lahmudin Sipahutar, Yanyang Thanri, Evin Syahrin, Fetty Ade Putri, Fitri Pranita Nasution, Efani Desi</i>	42-46
	Selection System for Poor Student Recipients Using the MFEP Method	
9	<i>Adil Setiawan, Erwin Panggabean, Mas Ayoe Elhias Nasution, Ahir Yugo Nugroho Harahap, Maulia Rahman, Ermayanti Astuti</i>	47-51
	Identification of Dysmorphic Body Disorders Using the Bayes Theorem Method	
10	<i>Dini Ridha Dwiki Putri, Muhammad Reza Fahlevi, Rida Utami, Fitri Pranita Nasution, Rahmad Doni, Lahmudin Sipahutar</i>	52-56
	The Influence of Grit on Students' Academic Achievement: Mediated by Online Learning	
11	<i>Gat, Husni Teja Sukmana, Sandy Kosasi, Kartika Sulastri</i>	57-63
	Predict the Timeliness of Customer Credit Payments at Finance Companies Using a Decision Tree Algorithm	
12	<i>Nita Sari Br Sembiring, Mikha Dayan Sinaga, Erwin Ginting, Fithry Tahel, Muhammad Fauzi, Yudi</i>	64-68
	Evaluation on Data Operations Management using CMMI and DMBOK: BDPJN Case Study	
13	<i>Randy Prima Brahmantara, Destri Yanti Hutapea, Yova Ruldeviyani</i>	69-75
	E-Learning Design Using Iconix Process for Distance Learning	
14	<i>Dedek Indra Gunawan Hts, Andrian Syahputra, Rahmi Ramadhani, Deny Adhar, Heri Gunawan, Dedi Leman</i>	76-80
	Assessing Acceptance of Electronic Marketing among Consumers of Agribusiness Products	
15	<i>Ihsanul Muttaqien, Ujang Maman, Iwan Aminudin, Elpawati Elpawati, Yayat Suharyat, Nana Danapriatna</i>	81-86
	Regulating Online Peer-To-Peer Accommodation Services in the Malaysian Waqf Housing	
16	<i>Mahyuddin Daud, Norlaili Mat Isa</i>	87-93
	Applying Horspool Algorithm in Asmaul Husna Educational Game Mobile Application	
17	<i>Jessi Adirachman, Fenty Eka Muzayyana Agustin, Nurul Faizah Rozy, Jauhar Azizy, Kamarusdiana, Murodi</i>	94-98

18	<p>Modeling of Decision Support System as an Assistant Tool in Selecting Health Equipment Suppliers with TOPSIS Method</p> <p><i>Lili Tanti, Safrizal Safrizal, Mas Ayoe Elhias Nasution, Ratih Puspasari, Bob Subhan Riza, Juli Indriani</i></p>	99-105
19	<p>Assessing and Enhancing an Existing User Experience (UX) of Smart Regency Mobile-Apps Service with meCUE 2.0 Framework</p> <p><i>Aang Kisnu Darmawan, Mohammad Bhanu Setyawan, Bakir Bakir, Miftahul Walid, Moh. Aminollah Hamzah, Ahmad Asir</i></p>	106-112
20	<p>Detecting Hot Spots Using GIS Analysis: Case Study of Indonesia's Political Opposition Hashtag</p> <p><i>Bambang Ruswandi, Zulkifli, Raspiani Raspiani, Taufik Sutanto</i></p>	113-120
21	<p>Determining Catering Supply Chain Performance using Supply Chain Operations Reference and Analytical Hierarchy Process</p> <p><i>Qurrotul Aini, Syahla Tamira, Fadli Amin, Mohammed Ikhlaiel</i></p>	121-126
22	<p>The Impact of Information Literacy on Prophetic Communication Behavior through Using Information on Electronic Media</p> <p><i>Ade Abdul Hak, Hikma Irfaniah, Fahma Rianti, Fadhilatul Hamdani, Lili Sudria Wenny, Parhan Hidayat</i></p>	127-133
23	<p>User Experience Design Analysis Using Lean UX Method</p> <p><i>Nur Aeni Hidayah, Zulfiandri Zulfiandri, Ahmad Rafiuddin, Yusuf Durachman, Eri Rustamaji</i></p>	134-140
24	<p>Evaluating User Interface of A Transport Application Using Usability Evaluation Methods</p> <p><i>Zulfiandri Zulfiandri, Silma Novshienza Putri, Aang Subiyakto</i></p>	141-148
25	<p>Conceptual Framework on Halal Meat Traceability to Support Indonesian Halal Assurance System (HAS 23000) using Blockchain Technology</p> <p><i>Ridhati Mardiyah, Dewi Khairani, Tabah Rosyadi, Asep Usman Ismail, Yusuf Durachman, Siti Ummi Masruroh</i></p>	149-153
26	<p>Implementation of the Incremental Model in Building a Web-Based Information System for Wealth Reporting of State Civil Apparatus</p> <p><i>Muhamad Nur Gunawan, Nur Aeni Hidayah, Hasnan Attariq</i></p>	154-160

27	Object Detection System in Blind Spot Dump Truck Area Using Fuzzy Logic with Sugeno Method <i>Nenny Anggraini, Muhamad Vicky, Imam Marzuki Shofi, Luh Kesuma Wardhani, Nashrul Hakiem, Tabah Rosyadi</i>	161-167
28	Developing Mobile English Dictionary for Academic Writing: An Initial Model for College Students <i>Muhammad Farkhan, Maudlotun Nisa, Inayatul Chusna, Moh Supardi, Saefudin, Elve Oktafiyani</i>	168-174
29	Topic Analysis of Indonesian Comment Text Using the Latent Dirichlet Allocation <i>Syopiansyah Jaya Putra, Muhammad Abdul Aziz, Muhamad Nur Gunawan</i>	175-181
30	Fast Knowledge Discovery in Social Media Data using Clustering via Ranking <i>Taufik Sutanto, Richi Nayak</i>	182-190
31	Comparing Bitcoin's Prediction Model Using GRU, RNN, and LSTM by Hyperparameter Optimization Grid Search and Random Search <i>Nurhayati Buslim, Imam Lutfi Rahmatullah, Bayu Aji Setyawan, Aryajaya Alamsyah</i>	191-197
32	Analysis of User Satisfaction on Website Quality of the Ministry of Agriculture, Directorate General of Food Crops <i>Nia Kumaladewi, Inggrit Larasati, Asep Saepudin Jahar, Hamka Hasan, Arif Zamhari, Jauhar Azizy</i>	198-205
33	ICT Based Learning in Junior High School: A Qualitative Case Study <i>Siti Khadijah Ibrahim</i>	206-212
34	Knowledge Management System to Improve The Competence of Aglaonema Farmers <i>Yuni Sugiarti, Arif Imam Santoso, Irman Hermadi, Euis Sunarti, Rizal Broer Bahawares</i>	213-217
35	Analysis of the Effect of Service Quality on Loyalty Behavior of DANA E-Wallet Users Using the E-SQUAL Extended Model <i>Nur Aeni Hidayah, Rinda Hesti Kusumaningtyas, Alifia Afina Zalia</i>	218-222
36	Systematic Literature Review Method for Evaluation of User Experience On the Ticket Booking Application <i>Lisa Maharani, Yusuf Durachman, Suci Ratnawati</i>	223-230

37	Determining Priority of Ten Usability Heuristic Using Consistent Fuzzy Preference Relations <i>Emi Iryanti, Sri Suning Kusumawardani, Indriana Hidayah</i>	231-237
38	E-Learning During Pandemic COVID-19 Based on Students' Motivation <i>M. Abi Darmawan, Rena Latifa, Muthia Rahma Syamila, Imam Subchi, Akhmad Baidun</i>	238-242
39	Evaluation of Lecturer Performance during on Covid-19 in Improving of Learning Quality trough MOORA Method at UPH Medan <i>Labuan Nababan, Jernih Donda Sinurat, Lamtiur Sinambela, Jane Elnovreny, Frinto Tambunan, Erwin Ginting</i>	243-249
40	Evaluation of IT Service Operation for Public Services Using ITIL Version 3 and PDCA Cycle <i>Suci Ratnawati, Muhammad Qomarul Huda, Fifi Sopian</i>	250-255
41	Designing Data Warehouse for Academic Data Integration at the University in Indonesia <i>Nida'ul Hasanati, Eva Khudzaeva, Evy Nurmiati</i>	256-263
42	IT Adoption and Implementation on Pre-Implementation Phase The Case of State Islamic University in Indonesia <i>Muhammad Qomarul Huda, Nur Aeni Hidayah, Eva Khudzaeva, Amany Lubis, Zulkifli, Imam Sujoko</i>	264-269
43	Overfitting Problem in Images Classification for Egg Incubator Using Convolutional Neural Network <i>Apri Junaidi, Nia Annisa Ferani Tanjung, Sena Wijayanto, Jerry Lasama, Ade Rahmat Iskandar</i>	270-277
44	Improving Students' Mathematical Computational Thinking Using Scratch Program through Project Based Learning: A Development Research during Pandemic Covid-19 <i>Mega Ekka Hadi, Khamida Siti Nur Atiqoh, Kadir</i>	278-283
45	Systematic Literature Review on Methods Used in Classification and Fake News Detection in Indonesian <i>Muhammad Arif Rohman, Dewi Khairani, Khodijah Hulliyah, Arini, Pedi Riswandi, Idham Lakoni</i>	284-288

46	Performance Analysis of POX and RYU Controller on Software Defined Network with Spanning Tree Protocol <i>Nurul Zaenal Abidin, Andrew Fiade, Arini, Saepul Aripriyanto, Nuryasin, Velia Handayani</i>	289-294
47	A Comparison of the Tsukamoto Fuzzy Method and The Dempster Shafer Method for Diagnosing Leptospirosis <i>Mikha Dayan Sinaga, Nita Sari Br Sembiring, Erni Darmayanti, Rizki Maulida, Edy Victor Haryanto, Erwin Ginting</i>	295-300
48	Antecedents of Purchase Decision of E-Commerce <i>Indriana Hidayah, Doni Purnama Alamsyah, Christian Salomo, Johanes Erico Widagdo</i>	301-305
49	Consumer Behavior and Sustainable Performance: Perceived of E-Service Quality on Online Shopping <i>Satrio Matin Utomo, Jonathan Ricky Sandjaja, Wiraga Seta Yustiawan, Doni Purnama Alamsyah</i>	306-310
50	Information System Project Success based on User Experience at the Village Administration Office <i>Dwi Yuniarto, Esa Firmansyah, Asep Saeppani, Dani Indra Junaedi</i>	311-318
51	An Alternative Model to Measure Smart Space Implementing Success <i>Dwi Yuniarto, Dani Indra Junaedi, Dody Herdiana, Aang Subiyakto</i>	319-325
52	Studies about the Reasons for Choosing Social Networking with Free Vendors Using the Technological Acceptance Model <i>Asep Saeppani, Agun Guntara, Irfan Fadil, Dani Indra Junaedi</i>	326-331
53	Optimization Parameters Support Vector Regression using Grid Search Method <i>Irfan Fadil, Muhammad Agreindra Helmiawan, Yanyan Sofiyani</i>	332-337
54	The Antecedent of Digital Business Improvement through IT Service Management <i>Sandy Kosasi, I Dewa Ayu Eka Yuliani, Budi Susilo, Utin Kasma, Robertus Laipaka</i>	338-344
55	The Influence of Big Five Personality Trait Self Control on Cyberloafing <i>Lukas Liani, Akhmad Baidun, Muthia Rahma Syamila</i>	345-350

56	The K-Nearest Neighbor Algorithm for the Classification of Internet Users in Rural Campus <i>Esa Firmansyah, Dody Herdiana, Dwi Yuniarto, Dani Indra Junaedi</i>	351-357
57	Security Model using Intrusion Detection System on Cloud Computing Security Management <i>Muhammad Agreindra Helmiawan, Irfan Fadil, Yanyan Sofiyan, Esa Firmansyah</i>	358-363

Abstract—This study aimed to identify factors of electronic marketing (e-marketing) acceptance and how they influence the acceptance among consumers of Hartanimart.com. This type of research refers to the influences of the independent variables (i.e., usefulness, ease, attitude, and subjective norm) on the dependent variable (i.e., the use of e-marketing). The samples used were 100 people who made a purchase seed through Hartanimart.com by the method of accidental. Data were analyzed statistically using the partial least square structural equation modeling (PLS-SEM) method. The results of the study found that three assumptions were accepted, i.e. a factor of usefulness, ease, and subjective norms have a significant level of 0.05 and the value of t-count is greater than t-table (> 1.96) against the use of e-marketing Hartanimart.com and one of them was rejected, i.e., the factor of attitude did not affect significantly influence the use of e-marketing Hartanimart.com. Factors of usefulness, ease, and subjective norm can support consumers in increasing the use of e-marketing.

Keywords— *Electronic Marketing, Acceptance Model, Agribusiness Products, PLS-SEM.*

I. INTRODUCTION

Progress of information and communication technology (ICT) for the digital era brings a great impact on all aspects, not least changes in the business world and the evolution of marketing strategy. Every agribusiness also currently vying to bring up the mobile marketing system on your smartphone that will make it easy for users to feel the products offered by the company. The role of ICT helps us interact, communicate, and even to convey information to people from all over the world with cheap, fast, and ease. The growth of its use has led to the decline of the marketing tools of the traditional mass media: television, radio, newspaper, and magazine [2].

The emergence of the paradigm of the evolution of marketing in the form of the concept of modern marketing through the internet is called e-marketing [3]. According to Menberu [4], e-marketing is the use of the internet and digital media to sell products and services in expanding the expanding customers of the target company. With the increasing number of users of the internet around the world every day, various companies have designed their web pages that can be accessed by computers, tablets, smartphones, and other electronic devices [2]. Data Social [5] shows that in 2018 in Indonesia, the number of internet

users as much as 132,7 million of the total 265.4 of a million souls. This gives a lot of opportunities including agribusiness products and many agribusiness entrepreneurs who have made use of e-marketing as a medium for marketing the products of agribusiness, for example in the Country of China and the United States [6].

Opportunities to use e-marketing as a promotional tool and an effective business tool [7]. To market, the products of agribusiness use aright system of e-marketing required a lot of adjustment can, because differences in the characteristics of agribusiness products which have the uniqueness of the covers are easily damaged (perishable), large volume (voluminous), and take up space large (bulky) [8]. In addition, the product is seasonal, dependent on nature, the non-uniformity of quality, the product offering is relatively small and the chain of marketing is relatively long [3]. Through the program, the Synergy of the Action of the People's Economy which was proclaimed by the government, the agribusiness sector can dominate the structure of the gross domestic product (GDP) amounted to 13.45%, or the second-highest after the industrial sector 19,62% [9] and the efforts of the government in the transformation of the use of e-marketing it turns out that the positive response by the various parties other one Hartani Farm through the system Hartanimart.com.

Hartani Farm engaged in the sale of agribusiness products plant seeds vegetables and fruit as well as provide a package of home gardens super complete (seed featured + paper tray seedling + cocopeat + polybag + nutrients NPK + nutrition gandasil leaves + mini shovel). Hartani Farm exists to provide easiness in all of the information needed by the customers simply by opening the website in Hartanimart.com. Through a system of e-marketing, the Hartani Farm characteristically carries the uniqueness of the concept of urban farming, which means utilizing the open space of narrow into a land of green and productive system Hartanimart.com created to facilitate the consumer, the chain of business administration become shorter, stabilize prices, expand the range of the market, and allows the acceleration of the cycle buyer leads to an increase in revenue.

According to Zawaideh [10], implemented a system of marketing through e-marketing is expected to generate a positive impact to meet the needs of customers, establish a good relationship with customers, information on new

product ideas as well as the volume of sales without incurring the cost of additional. It is interpreted that the application of e-marketing can realize an increase in sales volume by customer related to the level of use of e-marketing and many researchers perceive marketing as a framework that embraces the concept of the idea of how the customer to receive the new system of the company is offering products [11].

Each strategy marketing is creating a life cycle of a company through the acceptance of the use of the system [12]. One of the models of acceptance that is often used, namely the technology acceptance model (TAM) [13, 14]. This model is very popular in measuring the adoption of information technology for the acceptance of the use of the new system [15]. Therefore, the researchers modify the model, which is determined by four key variables proposed by Davis [16], namely usefulness, ease, attitude, and subjective norm. Based on the four key variables are presented, then the authors interested to analyze the influence factors of usefulness, ease, attitude, and subjective norm on the level of use of e-marketing on Hartanimart.com in the activity of agribusiness sales of the product package of seeds.

II. LITERATURE REVIEW

The problems shown in this study is a reference of the previous researchers, in generating support for the latest facts by modifying the approach of TAM proposed by Davis [16], and the theory of reasoned action (TRA) developed by Ajzen & Fishbein [17], taking four key variables, namely usefulness, ease, attitude, and subjective norm. The factors used in the examination that affect the acceptance of the use upon the application of e-marketing on Hartanimart.com.

Consider the identification of factors that could potentially affect the use of e-marketing and expanded with how big a factors proficiency level allows to influence the level of use of e-marketing (Fig. 1). Reinforced by Alharbi & Alhider [18] recommends that the use of e-marketing has to understand the perception of the customer (benefit, ease, attitudes, and interests) and to formulate a competitive strategy that meets the satisfaction of consumers. According to Minkiewicz [19], indicators of the acceptance of the new system include a sense of fun based on the expectations and subjective norm or support the perception of others to run or not to perform a behavior based on the opinion or input to be used as a reference. Understand the results of the research that has been there the authors are interested to discuss the return factor of usefulness, ease, attitude, and subjective norm.

The idea about the use of e-marketing in the agribusiness sector lately has been getting great attention [20]. Each received a new system in the company is a vital aspect that needs to be considered thoroughly [21]. This especially gives the important facts related to the sustainability of the life cycle of the company in the use of e-marketing through the four variables key (usefulness, ease, attitude, and subjective norm). For usefulness and ease is an integral value of the function or information that can help ease the job, improve productivity and effectiveness [22]. About attitude (attitude) is a reaction evaluative beneficial against something and subjective norms (subjective norm) or social norms are the desire or

the social pressure to perform or not perform the behavior [23].

Fig. 1. The Proposes Research Mode

As already previously described, this research aims to identify the factors that the use of e-marketing in the purchase of seed products on the Hartanimart.com proposed by Davis [16], and Ajzen & Fishbein [17], extended with how big the influence of factors on the level of use of e-marketing, so that there are assumptions or hypothesis: Allegedly a factor of usefulness, ease, attitude, and the subjective norm has a positive effect on the use of e-marketing.

III. RESEARCH METHOD

A. Population and Sample

Refer to the flow of research the target population is the customers Hartani Farm who have received over the use of Hartanimart.com in the purchase of seed, so the number of the population is not known for certain. Then the formula sampling is the unit of analysis through many members of the sample at least 10 times the number of variables studied (10×6 variable = 60 respondents). Several PLS-SEM studies [24-28], as it is also conducted by Guritno [29], that the number of required samples in the PLS-SEM ranged from 100 to 200 samples, so it can be said rounding to 100 people sample is sufficient to represent the population. Then the sampling technique using the method of accidental in which the taking of respondents by coincidence, that anyone who deigned to fill out a questionnaire in which the samples meet the characteristics of the population that is deemed suitable as a source of data [30].

B. Data Collection Technique

Questionnaire data collection methods in the form of statement-related variables were measured using a Likert scale [31]. The first stage of the questionnaires distributed directly to the 30 respondents on the outside of the sample to be selected first and the statement that did not pass the test will be replaced/removed in the analysis of the research. Furthermore, the questionnaire has already passed the test distributed back online with the assistance of the owner of Hartani Farm to get the number of 100 respondents as a customer user Hartanimart.com. The Likert scale helps to gauge the statement of a person on the aspect of usefulness, ease, attitude, subjective norms regarding the use of e-marketing, and customer

satisfaction. The researchers obtained information from the instrument research that factors the use of e-marketing and instrument the satisfaction of consumers (people who've made purchase seeds through the medium of e-marketing Hartanimart.com).

C. Data Analysis Technique

This study used a test pass requirements questionnaire (validity and reliability and using the technique of the analysis of PLS-SEM. The approach of PLS is distribution-free, does not assume a particular distribution of data, can be either nominal, category, ordinal, interval, and ratio of [13]. PLS is used to determine the complexity of the influence between the latent variables and indicators. The steps of the PLS-SEM were: (1) designing the structural model (inner model), (2) designing the measurement model (outer model), and (3) constructing a diagram of the path (path diagram) through the tool SmartPLS version 3.00.

IV. RESULTS AND DISCUSSION

A. Characteristics of Respondents

The characteristics of the respondents in this research are intended to describe the nature of the default and the background from consumer Hartanimart.com that in the underlying by aspects of gender, place of residence domicile, age, education level, employment status, and monthly income, which is discussed further below. Knowledge about the characteristics of the consumers needs to be known by a marketer to determine the target market to position their products appropriately [32]. To clarify the characteristics of the respondents in question, then presented in a tabular form as follows:

TABLE I. CHARACTERISTICS OF RESPONDENTS

Items	Item	Percentage
Sex	Men	62%
	Women	38%
City	Jakarta	11%
	Bogor	33%
	Depok	8%
	Tangerang	9%
	Bekasi	13%
	Bandung	5%
	Other	21%
Age	20-29 years	26%
	30-39 years	35%
	40-50 years of	12%
	Over 50 years	27%
Education	JUNIOR high school or equivalent or high SCHOOL or equivalent	6%
	Diploma/Bachelor	17%
	Graduate/Doctorate	69%
Job	of CIVIL servants	8%
	Private sector Employees	13%
	Entrepreneurial	34%
	Other	43%
Revenue	At the bottom of the Rp1.000.000,00	10%
	Rp 1.500.000,00 – Rp 4.500.000,00	51%
	Rp 5.000.000,00 – Rp 10.000.000,00	22%
	Rp 10.500.000,00 – Rp 20.000.000,00	8%
	above \$ 20.000.000,00	13%

^a. Source: Primary Data, 2020 (processed)

Characteristics of respondents describe some aspects of demographics, namely gender, domicile, age, education, working status, and monthly income. Based on Table 2, shows the respondents were male gender as much as 62%

and the female gender as much as 38%. Needs in view the aspects of domicile to find out how widespread the segmentation of customers and the majority of customers Hartani Farm in conducting transactions through Hartanimart.com domiciled in the City of Bogor as much as 33%. Seen from the level of age showed respondents aged 20-29 years were 26%, age 30-39 years as much as 35%, the age of 40-50 years as much as 12%, and > 50 years as much as 27%).

Next on the aspects of education of respondents indicated with the highest education level of JUNIOR high school/equivalent as much as 6%, the level of high SCHOOL as much as 17%, graduate diploma/degree as much as 69%, and as much as 8% education level Graduate/Doctorate. While the views of the status of his work show that the respondents worked as a CIVIL servant as many as 15 people (8.8 percent), private employees as many as 80 people (47,1), self-employed as many as 13%), private-sector employees as much as 34%, entrepreneurs as much as 43%, and status other jobs as much as 10%. For monthly income level of the dominant on the income range between Rp 1.500.000,00 – Rp 4.500.000,00 as much as 51%. The findings of the characteristics of the respondents described the that customers who make purchase seeds through Hartanimart.com application by type of gender men, who is domiciled in JABODETABEK, highly educated, status work in paan entrepreneur, and monthly income above the average minimum wage per region.

B. The influence Between Variables Using Analysis of PLS-SEM

According to the objectives of the study, the results of the data analysis step follows the steps PLS-SEM for draft measurement model (outer model) is a specification of the requirements to pass in the examination test the validity of the discriminant and reliability test Alpha or the Composite Reliability at the level of the constructs and sub-construct for all items must have a load on top of 0.7 suggested [33]. Based on the testing that has been done, then the output of the validity of the discriminant and reliability test Cronbach's alpha or the composite reliability are presented in Table 2 and Table 3.

TABLE II. THE OUTPUT OF THE DISCRIMINANT VALIDITY

Variables	X1	X2	X3	X4	Y
X1	0,879				
X2	0,690	0,754			
X3	0,330	0,582	0,851		
X4	0,477	0,594	0,420	0,891	
Y	0,594	0,673	0,474	0,681	0,838

^b. Source: Data output SmartPLS 3.2.1, 2020 (processed)

Be aware that the results of the validity of the discriminant of the entire construct is greater than the correlation value of each of the constructs or has a load over 0.7 which means that the value is valid and all the constructs in the model are tested to meet the criteria of discriminant validity. The Reliability of internal consistency was examined using the reliability test Cronbach's alpha or composite reliability. Analysis in PLS-SEM, the loading of the actual depends on the calculation results of the factor scores that determine the construct better (reliable) of the reliability of internal consistency on the value. As shown in Table 4, the values of Cronbach's alpha or the composite reliability of each construct in the model must be above the threshold

suggested by 0.7 [33] and supports the reliability of the measurement.

TABLE III. THE RESULTS OF CRONBACH'S ALPHA AND COMPOSITE RELIABILITY

Variable	Cronbach's Alpha	Composite Reliability
Usefulness	0,708	0,809
Ease of Use	0,776	0,783
The User's Attitude	0,786	To 0,796
Subjective Norm	0,725	0,819
The Use of E-Marketing	0,730	0,771

^c. Source: Data output SmartPLS 3.2.1, 2020 (processed)

The results of the reliability test in PLS-SEM use two methods of output Cronbach's alpha and composite reliability. Table 4 shows that all the variables have a value of Cronbach Alpha and Composite Reliability above 0.7 so it can be said all the indicators measuring each variable of the questionnaire is reliable. Thus the items on each of the concepts of variables are feasible to use as a measuring tool. As for the next steps of design of structural model (inner model), gave rise to the principle of the test the influence between latent variables, by looking at the percentage variance of the value of the R² line using the size of the stone-Geisser Q² test and see the magnitude of the path coefficient structural [34-37].

TABLE IV. THE VALUE OF R² ENDOGENOUS VARIABLES

Variable	R ²
The Use of E-Marketing (Y)	0,531

^d. Source: Data output SmartPLS 3.2.1, 2020 (processed)

A more detailed explanation of the results of the calculation of the r-square of each latent variable endogenous in Table 5 shows that the r-square value in the range of 0.224 and 0.531. According to Chin [38], the value of r-square is considered weak, moderate, and strong if it showed the value of 0.19, 0.33, and 0.67. On the calculation model of this study, the variable use of e-marketing Hartanimart.com relatively strong because of the approaching 0.67. The intent of these values is the exogenous variables that affect the use of e-marketing Hartanimart.com in the model tested, representing a 54% chance of the formation of the trust.

Model design construction flow diagram is also used for a right to see the testing of hypothesis is evaluated by using the bootstrap resampling. The application of the bootstrap resampling method allows the entry into force of the distribution of data free (free distribution), does not require the assumption of normal distribution, and does not require any sample that is large [39]. For testing the first hypothesis by comparing's value statistics (t-count > t-table) and the value of probability (p < 0.05), based on the number of 100 respondents than the value of t-table for an alpha of 5% was obtained of 1.96. The results of the hypothesis test the first inter-variable can be seen in Table 5.

Based on the results of testing the first hypothesis in Table 5, show that there is one variable no significant effect on the endogenous variables in the use of e-marketing Hartanimart.com, where the variables are the factors of attitude that has no significant effect because it has the value of t-count < 1.96 (1,140 < 1,96) and p-values > 0.05 (0,127 > 0,05). For other variables, can be

known to have a positive and significant impact on endogenous variables-its because it has at-count is greater than t-table (> 1.92) and (p-values < 0.05), so it can be assumed that the four key factors have a positive effect on the variable the use of e-marketing on Hartanimart.com and the first hypothesis can be accepted.

TABLE V. RESULTS OF THE HYPOTHETICAL ANALYSIS

Variable	T-statistics	P-values	Description
Usefulness → the Use of E-Marketing	1,981	0,047	Significant
Ease of → the Use of E-Marketing	2,926	0,002	Significant
Attitude → the Use of E-Marketing	1,125	0,130	Not Significant
Subjective Norm → the Use of E-Marketing	3,426	0,000	Significant

^e. Source: Data output SmartPLS 3.2.1, 2020 (processed)

Further discussion about the hypothesis related to the four key factors (usefulness, ease, and subjective norm) has a positive effect on the use of e-marketing (the hypothesis is accepted), but otherwise, his assumption was rejected, that factor is an attitude not affect significantly influence the use of e-marketing Hartanimart.com. Sin line with the research Supriono [40], the attitude, subjective norms, perception of benefits/perceived usefulness, and perceived ease of use has positive and significant effect against the actual use of accounting information systems. The results of this study also support the concept of TAM proposed by Davis [16], and the Theory of Reasoned Action developed by Ajzen & Fishbein [17], expressed the reaction and perception (the benefits, ease, attitude, and subjective norms) affect the acceptance of the use of information technology systems (actual system use). It can be explained that the factors of usefulness, ease, and the subjective norm against the use of e-marketing show can be formed or created increased access to Hartanimart.com so that the achievement of the frequency of sales of a good. While also necessary improvement of the provision of information in Hartanimart.com to give a response to a good attitude from consumers and then the potential to expand the market share of the purchase of packages of seeds are very possible to do through the system through the Hartanimart.com.

V. CONCLUSION

The findings of the hypothesis test produce only three key factors of usefulness, ease, and subjective norms that have a positive and significant impact on the level of use of e-marketing Hartanimart.com (the assumptions were acceptable). That is, the system Hartanimart.com optimally already provides information on perceived customers based on the three key factors and customers Hartanimart.com has also never recommend such a product to a prospective customer.

While the factors of attitude have no significant effect on the level of use of e-marketing Hartanimart.com (the assumption was rejected). That factor is an attitude not contribute to increasing the use of e-marketing Hartanimart.com so into consideration the improvement of the provision of information in Hartanimart.com and the potential to expand the market share of the purchase of packages of seeds are very possible to do through the system Hartanimart.com.
